"Pullulanase of Thermoanaerobacterium thermosulfurigenes EM1

(Clostridium thermosulfurogenes): molecular analysis of the gene,

T composite structure of the enzyme, and a common model for its

attachment to the cell surface.";

J. Bacteriol. 176:3295-3302(1994).

-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic

-!- CATALYTIC ACTIVITY: Hydrolysis of (1->6)-alpha-D-glucosidic

linkages in pullulan and in amylopectin and glycogen, and the
alpha- and beta-limit dextrins of amylopectin and glycogen.

-!- SUBCELJULAR LOCATION: CELL-BOUND. IT C-TERMINUS MAY SERVE AS AN

S-LAYER ANCHOR.

Proc. Natl. Acad. Sci. U.S.A. 99:14434-14439(2002).

-1- FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOUGHT TO PLAY A KEY ROLE IN THE DEWTAL PLAQUE BECAUSE OF THE DEWTAL PLAQUE BECAUSE.

-1- FUNCTION: PRODUCTION OF BACTERIAL CELLS AND FOOD DEBRIS.

-1- CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl}(N+1).

-1- SUBCELLULAR LOCATION: Secreted.
-1- DISEASE: DEWTAL CARIES.
-1- MISCELLANEOUS: GTF-1 SYNTHESIZES WATER-INSOLUBLE GLUCANS (ALPHA 1,5-LINKADES), GTF-S SYNTHESIZES WATER-SOLUBLE GLUCANS.
-1- ALINKED GLUCOSE AND SOME 1,6-GLUCOSE), GTF-S SYNTHESIZES BOTH FORMS OF GLUCANS.
-1- SIMILARITY: TO OTHER GLUCOSYLTRANSFERASES AND SOME TO A GLUCAN-BINDING PROTEIN FROM S.MUTANS.
-1- SIMILARITY: Contains 10 cell wall binding repeate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This SWISS-PROT entry is copyright. -I- CAPALATTC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose, lichenin and cereal beta-D-glucans.

-I- SIMILARITY: BELONGS TO CELLULASE FAMILY A (FAMILY 5 OF GLYCOSYL HYRROLASES).

-I- SIMILARITY: Contains 3 S-layer homology (SLH) domains.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A Geneseq 19Jun03:*

       The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5483 sequences (51), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN6604-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                   Streptococcus pyogenes DNase B, including the leader peptide, has the amino acid sequence given in AAR8881. The enzyme can be obtd. on a large scale by expression of encoding DNA (AAT12774) in transformed host cells, esp. Escherichia coli. Inclusion of the leader peptide facilitates purification of the recombinant enzyme. The DNase B is useful in immunoassays to detect anti-bNase B antibodies in serum as a marker for S. pyogenes infection, and is also useful as a vaccine or for treatment, via aerosol delivery, of cystic fibrosis.

New DNA encoding Streptococcus pyogenes DNase B - for recombinant prodm. of the enzyme in other bacteria, useful in immunoassays or for treating cystic fibrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A partial sequence (AAR8881) for Streptococcus pyogenes DNase B is the product of DNA clone lambda 2-6 (AAT12773) isolated from a S. pyogenes DNA library. A full-length sequence is given in AAR8823. The insert of the DNase B-encoding DNA clone can be transferred to expression plasmids for large-scale recombinant DNase prodn. in E. coli or other bacterial hosts. It is used in munnoassays to detect anti-DNase B antibodies in serum as a marker of S. pyogenes infection, and is also useful as a vaccine or cystic fibrosis treatment via aerosol delivery.
                                                                                                                          The sequence represents the N-terminal fragment of Streptococcus pyogenes DNA-ase-B, which is a marker of S. pyogenes infection. The protein may be used as a diagnostic agent or vaccine for S. pyogenes, or may be used as a diagnostic agent or vaccine for S. pyogenes, or may be used as a diagnostic agent or vaccine for S. viscosity. e.g. in cystic fibrosis.

(Updated on 25-MAR-2003 to correct PN field.)
New DNA encoding Streptococcus pyogenes DNase B - for diagnosing S. pyogenes infection, also new promoter for expressing other proteins
                                                                                                                                                                                                                                                                                                                                                                                            43 ROTQVSNDVVINDGASKYINEALAWTFNDSPNYYKTLGTSQITPALFPK

                                                                                                                                                                                                                              AAREBTO2 shows a mitogenic factor which exhibits rabbit peripheral blood lymphocyte mitogenicity and/or DNA hydrolysing activity. It is strongly associated with group A Streptococci and the nucleotide sequences can be used for the microdetection of the gene and provide an early diagnosis of infectious disease caused by the bacteria.

A modified Dasse B gene (AAT12780) was produced by PCR amplification of the native DNase B gene (AAT12774) in clone lambda 2-6. The gene was inserted into vector del-33 for expression in E. coli. Modification of the gene resulted in the presence of an additional Arg residue at the DNase B V-terminus (see also AAR88824).

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenee), comparising one of 5481 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                92 PAGWIGNPNHVKYKIEWLNG--LSYVGDFWNRSHLIADSLGG--DALRVNAVIGTRIQNV 147

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  136 SGLNNEARNLVPETAWFNGGNFTGTNDGNT-----ASMLYYENRLDSWLANHPNYYLDY 189
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TDNSSQVSTKSLASSVKQAPLTFKNQRQMVMANTDALGRAVDSHIQLKDSQEPKVKREPL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TYANVEGSYGVROSFGKNONPAGWIGNPNHVKYKIEWLNGLSYVGDFW--NRSHLIA---
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ---NAVTGTRTQNVGGRDQKGGMRYTEQRAQEWLEANRDGYLYY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 543 sequences (S1), given in the greptococcus pyogenes), comprising one of 543 sequences (S1), given in the greptococcus pyogenes), comprising one of 543 sequences (S1), given in cativity (I), nucleic acids encoding (I), ABN66044-ABN1526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a composition comprising (I) are used to detect of the composition comprising (I) are used to detect of a compound binds to composition comprising (I) are used to a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be manigitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromosophy, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                        Streptococcus, GAS, GBS, group B straptococcus, Streptococcus agalactiae, group A streptococcus, Streptococcus pyogenes, antibacterial, antilnflammatory, infection, vaccine, meningitis, gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAA05803 to AAA05872 encode proteins, polypeptides and peptides (given in AAY91275 to AAY91343) isolated from Group B Streptococcus (GBS), also known as Streptococcus agalactiae. The GBS polymucleotides and polypeptides have antibacterial activity. Immunogenic compositions and for the treatment or prophylaxis of GBS infection. The polymucleotides and polypeptides can also be used as vaccines polymucleotides and polypeptides can also be used in the detection of GBS and for screening DNA encoding bacterial cell envelope associated or secreted antigens in gram positive bacteria. AAA05873 to AAA05941 represent primers used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                89 NQNPAGW--TGNPNHVKYKIEWLNGLSYVGDFWNRSHLIADSLGGDALR-----VN 137

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GAS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the appecification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABM66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Nucleic acids encoding (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus in a biological sample. (I) is used to detect Streptococcus in a biological sample. (I) is used to detecmine whether a compound binds to used as a vaccine or dispositic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       89 LKTTPVGW-----H-NFKFYYNDGTQKA---WLMSRGRLICHQFSGLNNERKNLVPMTNW 139

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect whether a compound binds to used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be thereafted the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the season of the

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comparising one of 5483 sequences (31), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABM6604-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect Streptococcus in a biological sample. (I) is used to detect streptococcus in a biological sample. (I) is used to detect streptococcus in a biological sample. (I) are used to detect streptococcus in a biological sample. (I) are used to recombinantly produce (I), may be streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity or produce of prometography, immunoassays, and distinguishing/identifying
